operators: f79331	→	ffff (white)
numbers: e0e0e0	→	0000 (black)
AC: d6d6d6	→	(black)
display: 746860	→	(white) [actually, it's shaded...]

need number button function

User stories:

- can add, subtract, multiply, and divide two numbers
- can clear the input field with a clear button
- can chain together mathematical operations until equal button is hit

Kem's BONUS: implement Order of Operations for multiplication, division, addition, & subtraction

sample input:

$$1 + \underbrace{2 \times 3}_a / \underbrace{4}_b - 20 =$$

$$1 + b - 20$$

need number Builder function

- if multiple digits, join [single digit elsewise]
- convert string to number
- return number

var initialValue = 0;

var inputArray = [];

function multiply(a, b)

function divide(a, b)

function calculateSum(array)

function clearEntry(array)

function allClear(array)

function displayResult()

function numberBuilder

store mark place for multiply (a, b)

start building b

new operator: call ① multiply (a, b)

② replace $a \times b$ with result

Do similar for divide

① divide (a, b)

② replace with result

① on equal, calculate: sum(array)

② Display result, set input value to result
